

Amendments to the Abstract

Please **add** the following Abstract to this application.

-- The invention relates to a method for drawing up a list of contents in a controller device connected to a domestic network, said list enumerating the contents provided by various devices connected to the domestic network. The inventive method consists in transmitting a command specifying a filtering criterion from the controller device; in drawing up a local list in each device upon reception of said command; in transferring each local list to the controller device from the device in which the last was drawn up; and in assembling the local lists in the controller device in order to form a list of contents. The user can thus select a filtering criterion such as sports for example and can view the list of contents which enter into said filtering category and which are available for all devices. Quick content searches can also be carried out by the user. The invention also relates to a device enabling a list of contents to be drawn up according to said message.--
